05 Team: Identified Risks

PROJECT: Food Journal App

TEAM MEMBERS:

- A. Michael Sierra
- Gabriel Cánepa
- Camila Cardus
- Alfred Ortega
- Maximiliano Bustios

RISKS:

1. We do not know how to send email from our App.

Plan for mitigation: We all have the task to learn how to get what we have in our local data base out to our email service.

Update: *Alfred was tasked to researched on how to make use of this and found a tutorial website which shows the use of existing email platforms rather than creating an entire modules for sending emails. The website are posted on our group slack communication to assist everyone to be familiar and get comfortable in using it.*

2. Our App will store data locally using SQLite. We are not familiar with this process.

Plan for mitigation: We will research how to make this process and share it with other at the beginning of our meetings.

Update: *Gabriel did some research on how to use SQLite Database with Android Studio for storing information. He found some websites and video tutorials which will help us as we start this project. Gabriel is confident and feels that the use of this component is pretty straight forward.*

3. We do not know how what the requirements for distribution of the application we will make.

Plan for mitigation: We will set the time to learn the requirements and share the materials found with the team.

Update: *Maximiliano investigate the procedure to upload our application to Play Store and found that it will cost a paymnet of $25USD. Due to this factor, we decided to use the APK generator instead and share this file to our sponsor for evaluation.*
